

Waldo Farms, Inc. the worlds largest purebred Duroc breeder located in DeWitt, Nebraska and Whiteshire Hamroc, LLC the worlds largest purebred Yorkshire breeder located in Albion, Indiana, have formed an alliance to produce and market Duroc and Duroc component terminal boars and semen. Waldo Farms has provided Duroc genetics for a jointly operated Duroc and White Duroc nucleus unit in Indiana. The pigs will be produced and marketed under the Waldo Whiteshire United name.

Waldo and Whiteshire have built their genetic programs through generations of genetic testing, data analysis and selection based on BLUP technology (STAGES), individual animal data and general husbandry. Both firms continue R & D in product development, meat quality evaluation and molecular genetic applications. Guided by generations of family leadership committed to the pork industry, the strength of both organizations is a consistent, balanced genetic improvement plan.

Both genetic companies have high performing maternal and terminal pure lines. Additional lines include GGP, GP, Hybrid and composites. The expanded multi-site system will serve production systems of all sizes in the United States and abroad with healthy, productive breeding stock. Complete genetic consultation and services will continue to be provided to producers and breeding companies

Waldo Farms, Inc. and Whiteshire Hamroc LLC will maintain their independent production sites and genetic improvement programs, while utilizing their combined genetic assets to more effectively serve customers.
